12. ☐ Note the attached Information <i>Disclosure Statement</i>(s). (13. ☐ Other:	PTO/SB/08) Paper No(s)		

Continuation of 11. Contrary to Applicants assertion that Tomoike fails to teach that the surface of the substrate is uneven, does not illustrate that the surface Of the substrate is uneven, and does not teach or suggest a problem associated with unevenness of a substrate, Applicants teach (4th paragraph of page 3) employing a resinous layer to planarize a surface of a resinous substrate. In other words Applicants teach that a resinous substrate inherently possess certain surface roughness and that that it takes another resinous layer to planarize the surface. Furthermore, Applicants teach (page 6, lines 22-24) that a PET film which is also a resinous film generally has unevenness of the order of several hundred angstroms to 1 um. Therefore, it is safe to assume that the other examples of a filmy resinous substrate such as PEN or PES tauhgt by Applicants (3rd par. of page 3) also have certain unevennes. See also fig. 16 and par. 99 of Narasimhan et al. (US PG-Pub 2006/0071592) where it is shown a PEN substrate with a typical surface roughness.
